Bouldering Beta Buddy

Feb 13, 2026

Sketching Report

Presented by: Owen Kang, Yulin Yu, Jiemi Niu

01 VALUE PROPOSITION

Overview

3B (Bouldering Beta Buddy) is your personal climbing partner, helping you move from being stuck on a problem to knowing exactly what to try next—fast, clearly, and in a way that matches your body and style.

Key features and capabilities

3B combines community beta videos with AI-powered attempt analysis to support climbers before and after each try. Core capabilities include:

- Route-based beta library: quickly find how others solved the same problem
- Upload your attempt: record/import your climb and mark key moments (fall point, crux, foot slip)
- Compare view: side-by-side comparison of your attempt vs successful community beta

- Personalized suggestions over time: learns your strengths/weaknesses across attempts and generates targeted tips, drills, and a next-session plan

Benefits

3B reduces the friction between trying hard and improving effectively. Instead of relying on random advice or trial-and-error, you get actionable beta and coaching grounded in real examples and your own progress—so each session builds toward sending, not just repeating the same mistakes.

02 BRAINSTORMING

1. Mobile app: guided setup angle + auto-crop route
2. Smartwatch “beta cues”: haptic pulses at key moments while watching replay
3. AR glasses: overlay next-hold highlights on wall during route preview (not mid-climb coaching)
4. Voice assistant (earbud): post-attempt Q&A (“why did I barn-door?”)
5. Gym kiosk tablet: browse route beta library by color/grade
6. Projection mode: project beta path onto wall during route preview
7. Camera clip-on (chalk bag): quick capture + auto-upload
8. Partner mode: friend records; app guides them where to stand
9. Community heatmap: visual map of most-used holds per height band

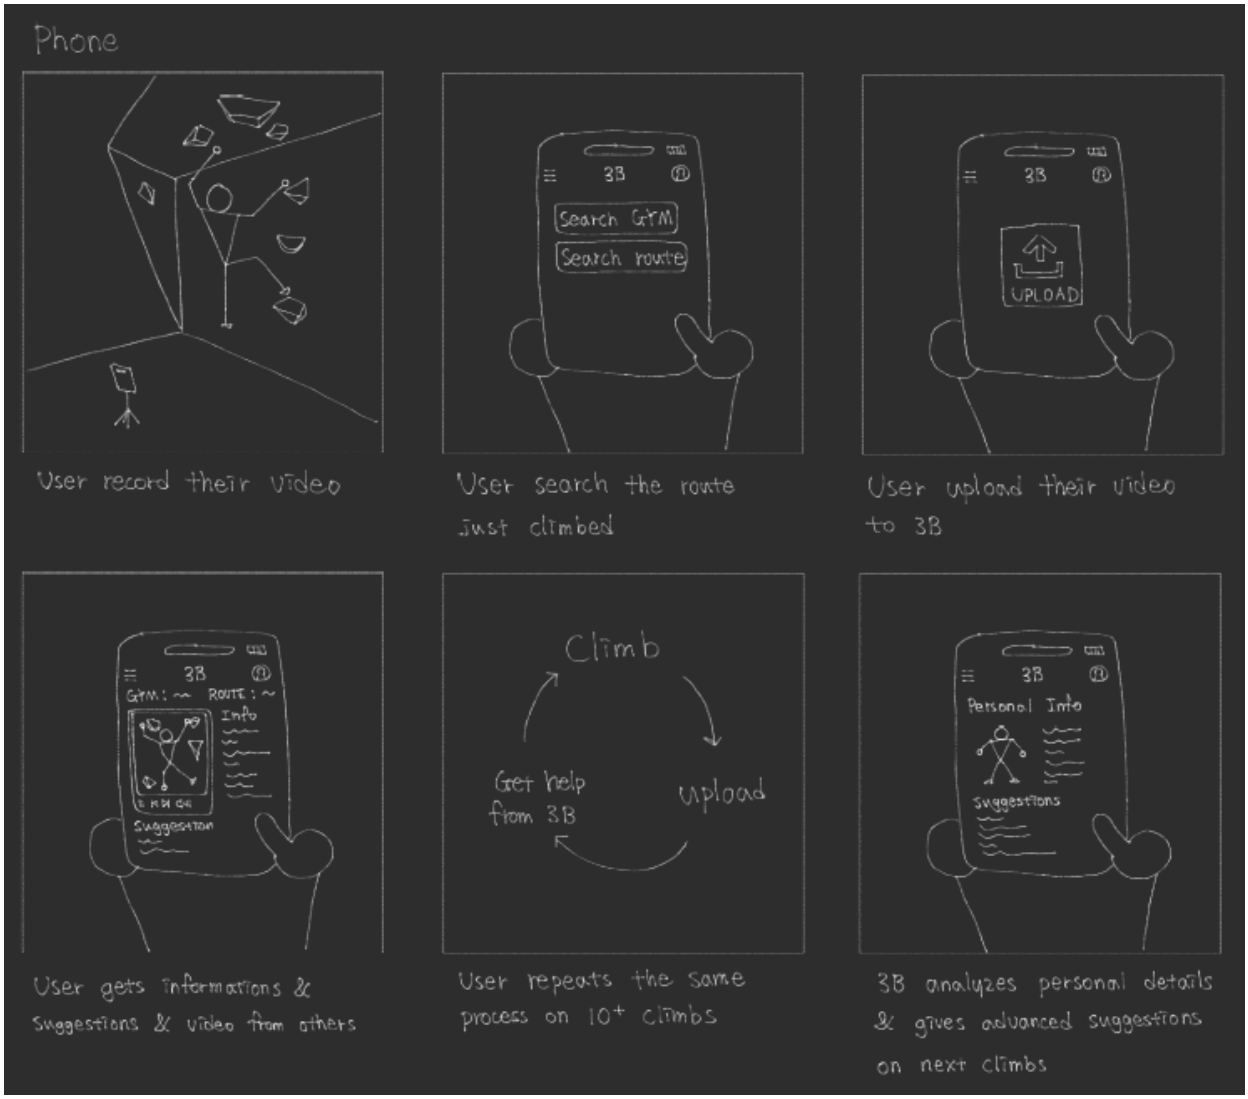
10. “Route DNA” QR scan: scan route tag; instantly see curated beta sets

11. Coach mode: create a lesson plan for a student; share annotated beta

12. Failure-point journaling: voice-note + auto-link to timestamp

03 CONCEPT SKETCHES

Phone



Phone
User record their video

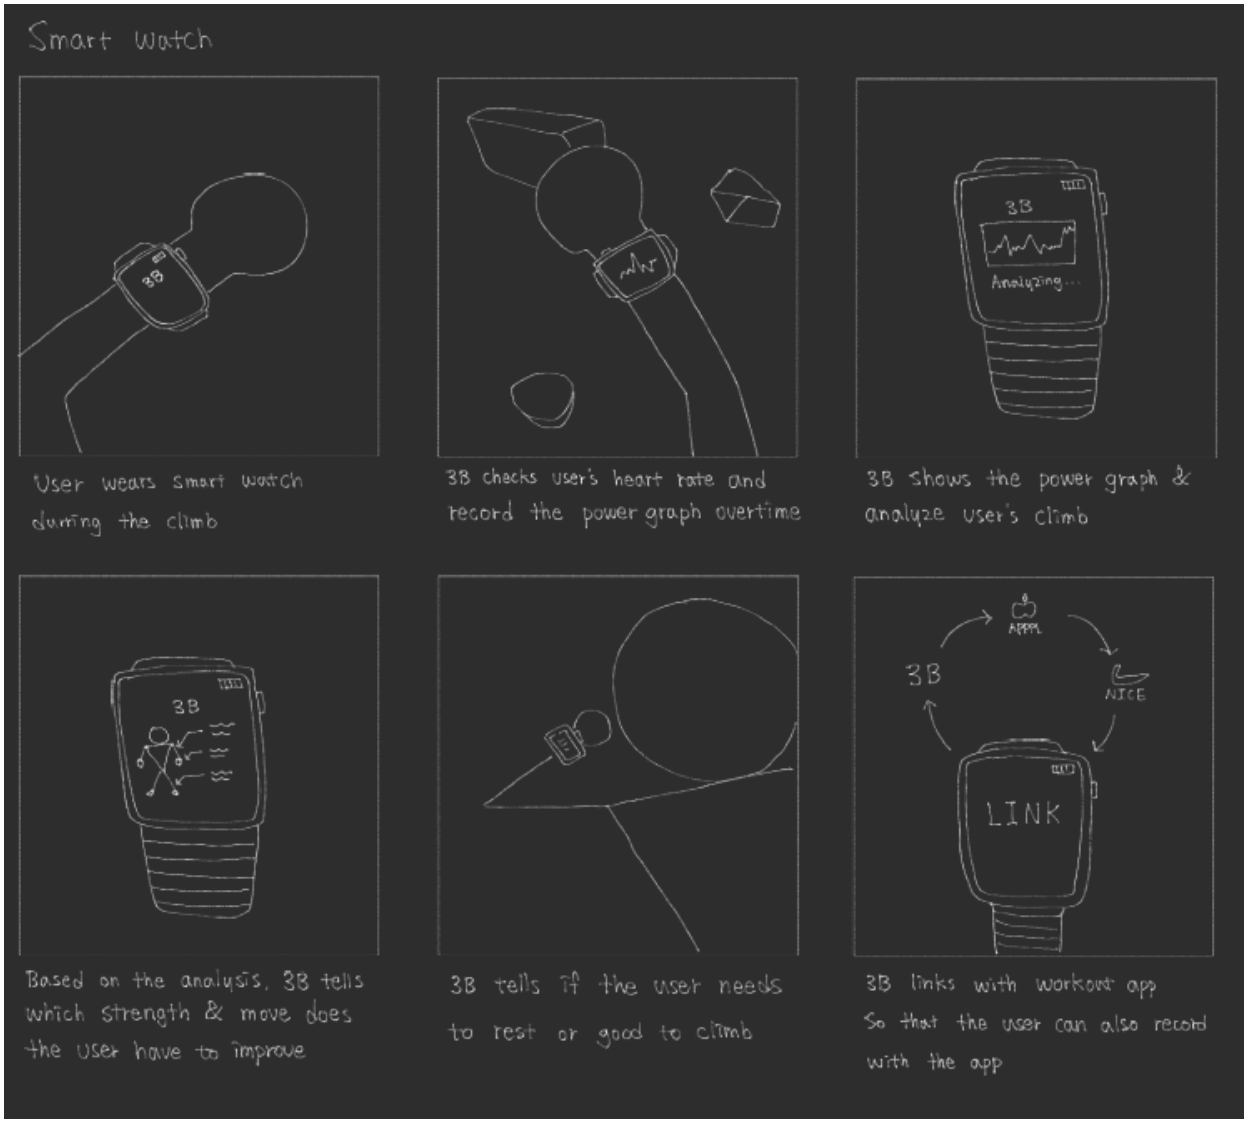
User repeats the same process on 10+ climbs
3B
Personal Info
Suggestions
3B analyzes personal details & gives advanced suggestions on next climbs

Smart Watch



Smart Watch
3B
User wears smart watch during the climb
3B checks user's heart rate and record the power graph overtime
3B
Analyzing...
3B shows the power graph & analyze user's climb
3B
Based on the analysis, 3B tells which strength & move does the user have to improve
3B tells if the user needs to rest or good to climb
3B
APPL
NICE
LINK
3B links with workout app So that the user can also record with the app

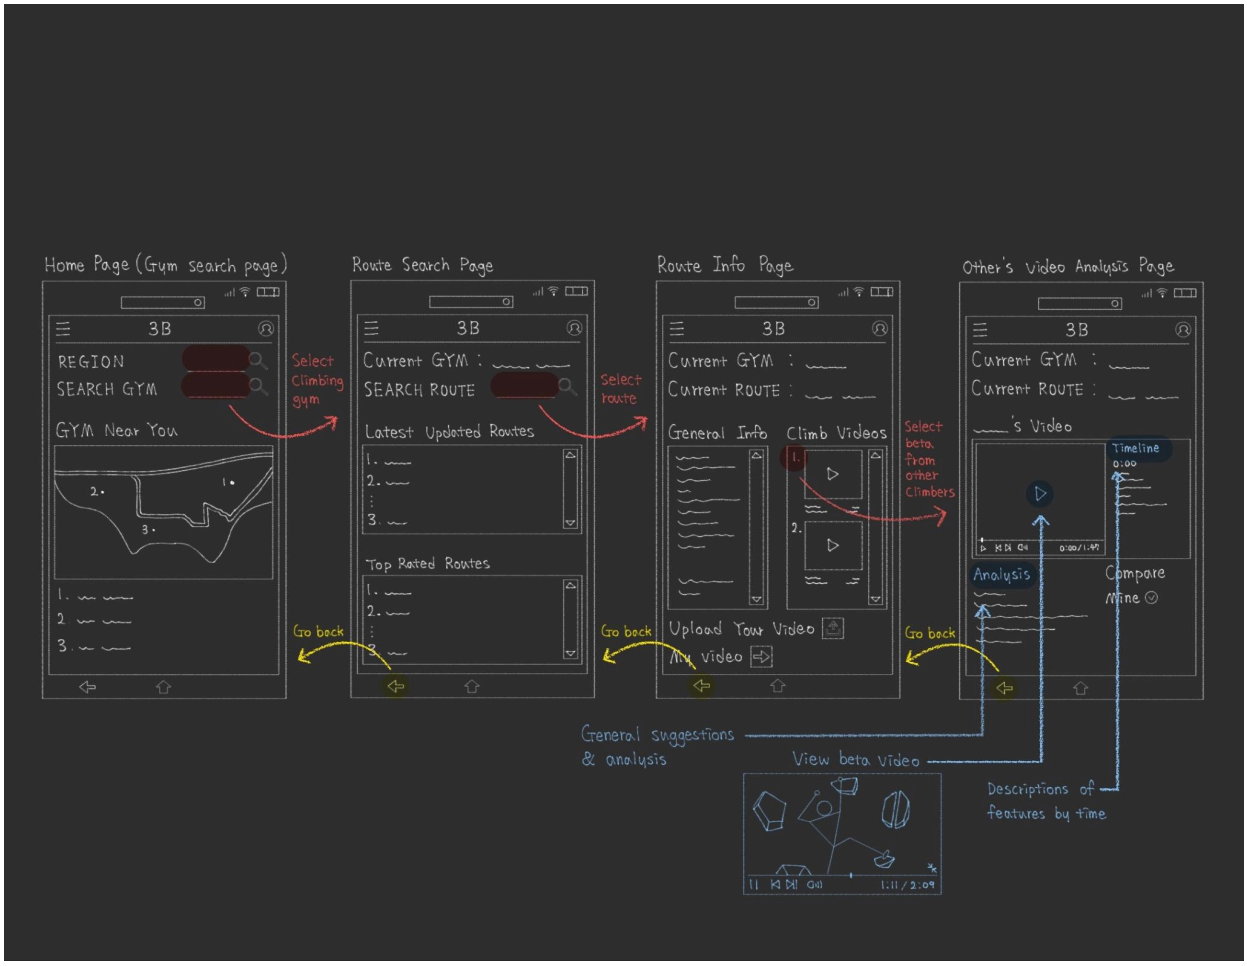
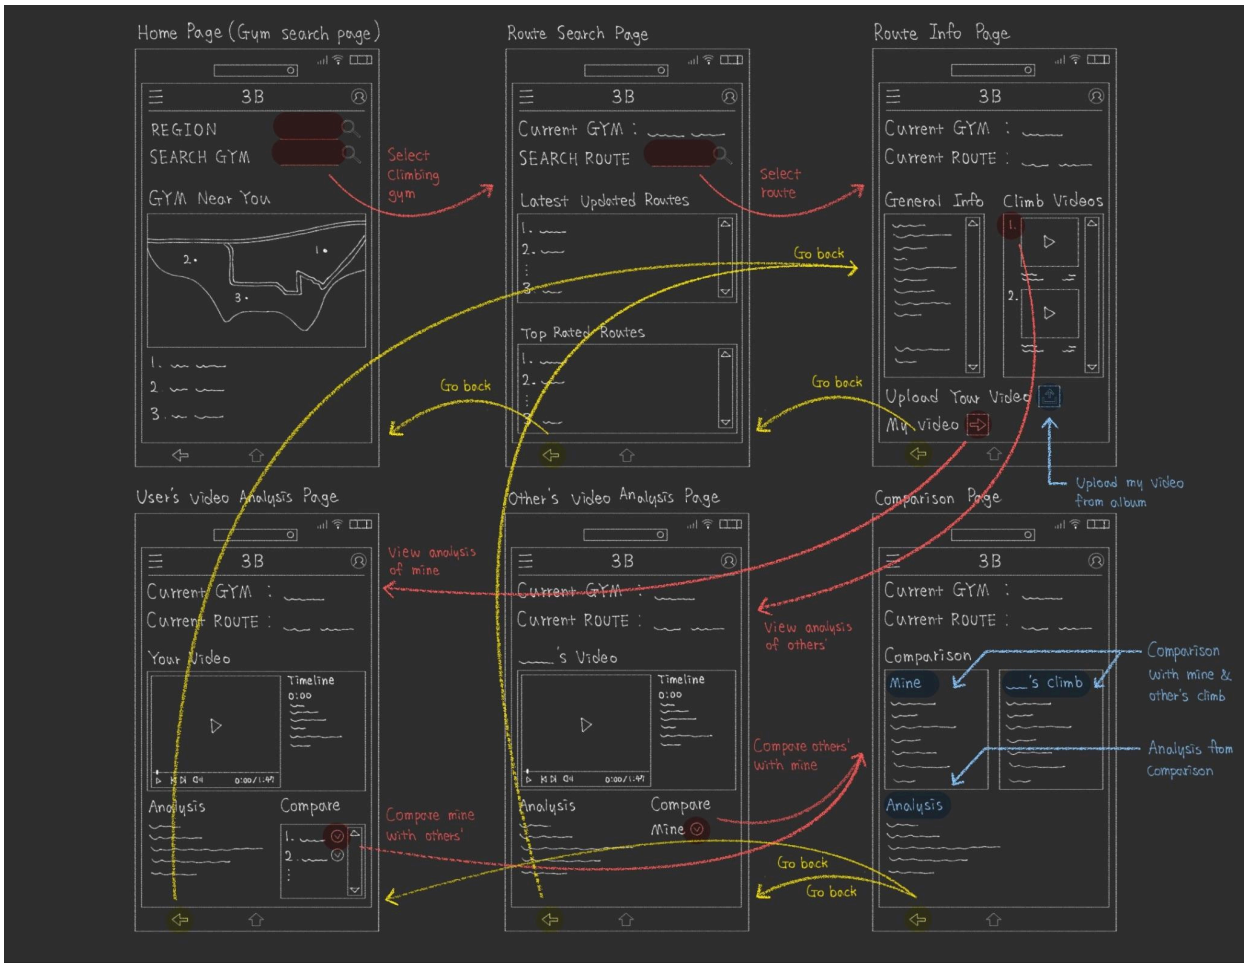
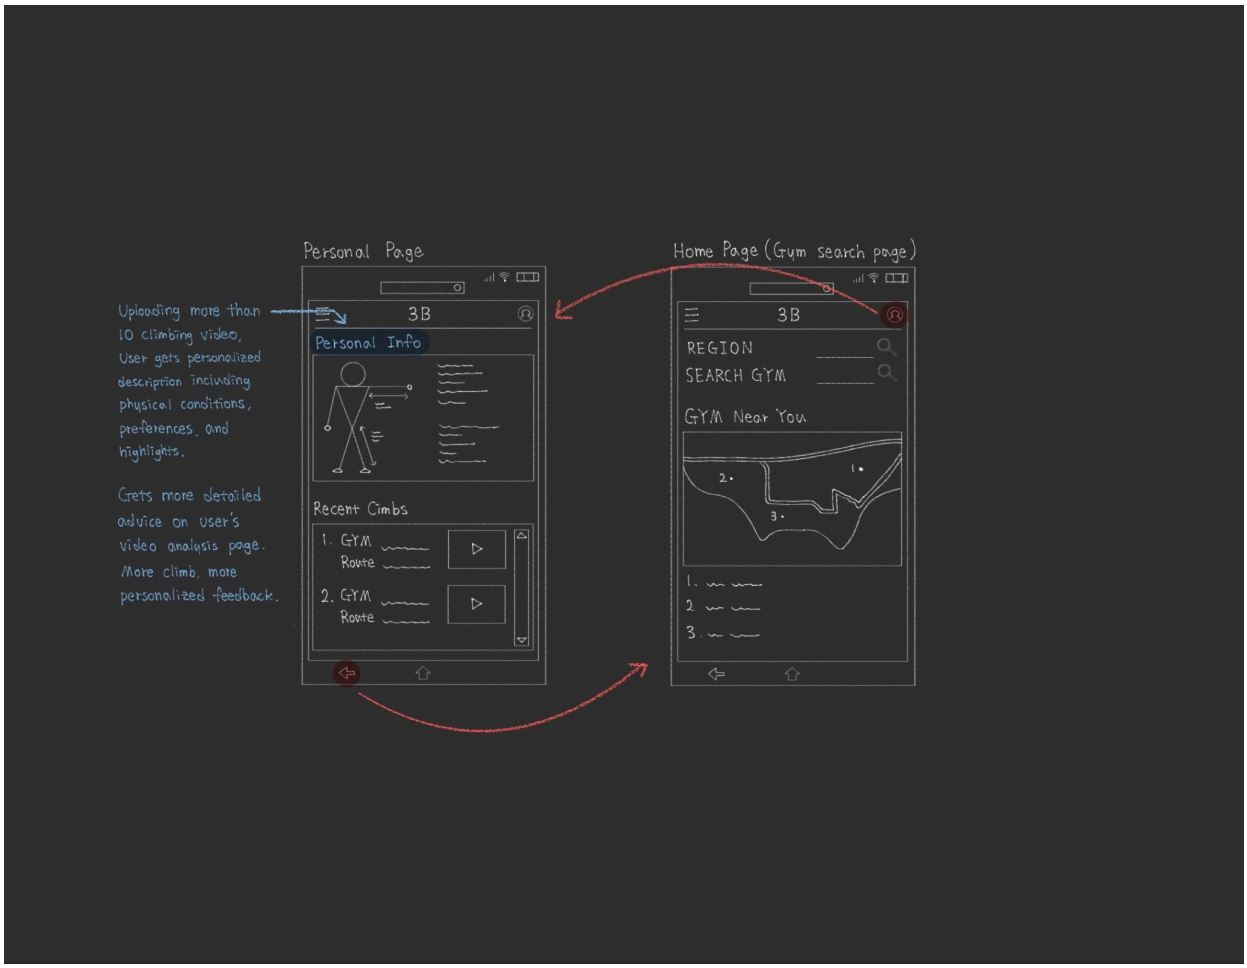
06 TASK FLOW

Simple: Users find the video to see the beta from the route



Moderate: Users upload their video and get feedbacks and compare with others' climb





Complex: Users uploads more climbing videos and get more personalized feedbacks
